b-hash

Name	b-hash
Ticker	HASH
Algorithm	Xevan
RPC Port	17654
P2P Port	17652
Block Spacing	180 Seconds
Difficulty Algorithm	DGW v3
Block Size	2MB
Mined/Minted Maturity	100 Blocks
Confirmations	6 Blocks

The Future of Masternode Payments.

What is b-hash?

b-hash is a cryptocurrency that is focused on bridging the payment gateway. There are currently not enough solutions that address the market need for cryptocurrency transactions within the real world. b-hash is designed to address that problem through a combination of fungibility, instant transactions, masternodes and advanced privacy functionality.

What makes b-hash different?

b-hash works with the newer Xevan algorithim, providing a highly secure blockchain that is more resistant to rental-based hash attacks. Masternodes support important network functionality, like coin privacy tools and instant transactions. Proof of Work ("mining") allows for network participants to contribute value to the b-hash ecosystem through the opportunity cost of mining b-hash. Masternodes provide an internal rate of return and are economic incentives to mine bhash.

The b-hash team will never hype the project up on false promises for the purposes of price movement or market excitement. We will set realistic milestones that are attainable and disseminate our decisions to the community in a transparent and timely manner along the way.

In turn, we believe what makes b-hash really different is our understanding that the community's support is our greatest asset. Our community comes first and we plan to always maintain that ethos.

The Future?

b-hash has an experienced team of cryptocurrency experts behind it. Functional areas of expertise include fundamental analysis, blockchain development, strategic marketing, community management and business development. The b-hash team will work hard to cultivate a large community of enthusiastic users and will then leverage the combined power of the HASH community to advance our mission of bridging the crypto to fiat gateway problem.

Our Community

Roadmap

Short Term

Day 0 - Clean launch
Day 7 - Exchange Listing
- Mining Rewards Begin

Week 1
- Masternode Payments Begin
- Marketing Node airdrop #1

Week 2
- Whitepaper Teaser
- Marketing Node airdrop #2

Week 3
- Development Updates
- Marketing Node airdrop #3

Week 4
- Mobile Wallet Update
- Marketing Node airdrop #4
- Whitepaper Release

Medium Term

Additional exchange listings

bhash branding updates

Mobile wallets released
Android
IOS

Begin exploring web/browser based wallet (similar to Metamask)

Initiate crypto-fiat partnership search

Long Term

Explore partners with major payment processor(s)

Credit Card processors

Crypto Processors

Major exchange listings
